

# **Vidisept N** Ophtiole

Polyvinyl pyrrolidone  
Cetrimonium chloride

The standard preparation to the Dry-eye

**Composition:** 1ml contains Polyvinyl pyrrolidone (Polyvidone) 50.0mg, preserved with Cetrimonium chloride 0.04mg.

**Properties:** Vidisept Ophtiole is a mild non-astringent disinfectant for the eyes without influence on vessels. Cetrimonium chloride exercises a bacteriostatic and fungistatic effect. Due to the inclusion of Povidone in the formula, Vidisept Ophtiole is a non-sticky ophthalmic lubricant that provides the eye with a protective film of considerable adhesive strength, eliminates irritation caused by foreign bodies and does not impede vision. Subjectively, Vidisept is found to be free of irritation; the objective tolerance is excellent.

**Contraindications:** not known

**Indications:** Common place eye affections of all types; irritations due to dust, smoke or light; dryness of the cornea due to heat or wind; corneal erosions; keratoconjunctivitis sicca; prophylaxis of catarrhal diseases of conjunctiva; as artificial lacrymal fluid in cases of dry eye syndrome.

**Dosage and application:** Unless otherwise prescribed, instil when required 1-2 drops 3-5 times daily.

**Side effects:** not known

**Presentation:** Ophtiole (dropper bottle) of 5 ml.
