

Extrauma – DNA Cream (recombinant Hirudin)

COMPOSITION :

Each 100 gm contains 280 I.U. of recombinant Hirudin.

INDICATIONS :

Contusions, distortions, muscular tears, traumatic hematomas, edema, erythema, varicosities, periphlebitis and anal periphlebitis with hemorrhoids.

MODE OF ACTION :

1-The active ingredient Hirudin (recombinant) is a direct thrombin inhibitor that acts as anticoagulant & for the prevention and treatment of hematomas.

2- Hirudin binds thrombin in a 1 : 1 ratio blocking the coagulation cascade & preventing the transformation of fibrinogen to fibrin.

CONTRA - INDICATION:

Known hypersensitivity against components

SIDE EFFECTS :

Not described in literature, neither found in the practical clinical .
The use, particularly long-term of topical products may cause sensitization phenomena.

DOSE :

- Dispense 2-3 cm of cream, two - three times per day and carry out a light massage until complete absorption.

- Local rectal application for hemorrhoids using the supplied dispenser two to three times per day.

OVERDOSE:

The product is for external use only. In case of accidental ingestion of Extrauma, it is suggested to seek medical advice for treatment of poisoning.
